

THE BENEFITS OF SPEKBOOM

Carbon Sponge

One hectare of Spekboom plants can absorb between four and ten tonnes of carbon dioxide from our atmosphere per year

Edible

Spekboom leaves are edible for both animals and humans. They are also high in nutrients like Vitamin C!

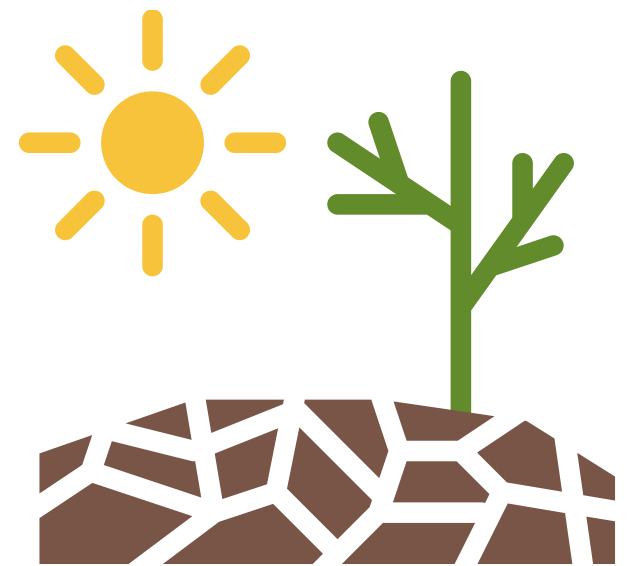

Medicinal

The medicinal properties of the Spekboom leaves include treatment of dehydration, blisters, mouth infections and skin ailments

Drought Resistant

During drought conditions, Spekboom close their stomata to reduce water loss and help them survive

Biodiversity Stimulant

Spekboom plants stimulate biodiversity and enable other plants to thrive in its mini biome

Low Maintenance

Spekboom plants are very easy to grow as they:

- Don't require formal planting
- Can survive on as little as 250 – 350 mm of water per year
- Can survive extreme conditions

Solar Energy Storer

Spekboom have the ability to absorb carbon dioxide during the day and store the energy to perform photosynthesis at night
